

# Surface Mount RF Schottky Barrier Diodes

## Technical Data

### HSMS-28XX Series

#### Features

- Surface Mount SOT-23/SOT-143 Package
- Low Turn-On Voltage (As Low as 0.34 V at 1 mA)
- Low FIT (Failure in Time) Rate\*
- Six-sigma Quality Level
- Single, Dual and Quad Versions
- Tape and Reel Options Available

\* For more information see the Surface Mount Schottky Reliability Data Sheet.

#### Description/Applications

These Schottky diodes are specifically designed for both analog and digital applications. This series offers a wide range of specifications and package configurations to give the designer wide flexibility. Typical applications of these Schottky diodes are mixing, detecting, switching, sampling, clamping, and wave shaping. The HSMS-2800 series of diodes is optimized for high voltage applications. The HSMS-2810 series of diodes features very low flicker (1/f) noise. The

#### Package Lead Code Identification

HSMS-2820 series of diodes is the best all-around choice for most applications, featuring low series resistance, low forward voltage at all current levels and good RF characteristics. The HSMS-2860 series is a high performance diode offering superior  $V_f$  and ultra-low capacitance.

Note that HP's manufacturing techniques assure that dice found in pairs and quads are taken from adjacent sites on the wafer, assuring the highest degree of match.

### Notes:

- $\Delta V_F$  for diodes in pairs and quads in 15 mV maximum at 1 mA.
- $\Delta C_{T0}$  for diodes in pairs and quads is 0.2 pF maximum.
- Package marking code is in white.
- Effective Carrier Lifetime ( $\tau$ ) for all these diodes is 100 ps maximum measured with Krakauer method at 5 mA, except HSMS-282X which is measured at 20 mA.
- See section titled "Quad Capacitance."
- $R_D = R_S + 5.2 \Omega$  at  $25^\circ\text{C}$  and  $I_f = 5 \text{ mA}$ .

## Absolute Maximum Ratings<sup>[1]</sup> $T_A = 25^\circ\text{C}$

Symbol	Parameter	Value
$I_f$	Forward Current (1 ms Pulse)	1 Amp
$P_t$	Total Device Dissipation	250 mW <sup>[2]</sup>
$P_{IV}$	Peak Inverse Voltage	Same as $V_{BR}$
$T_j$	Junction Temperature	150°C
$T_{stg}$	Storage Temperature	-65 to 150°C

### Notes:

1. Operation in excess of any one of these conditions may result in permanent damage to this device.
2. CW Power Dissipation at  $T_{LEAD} = 25^\circ\text{C}$ . Derate to zero at maximum rated temperature.

## Quad Capacitance

Capacitance of Schottky diode quads is measured using an HP4271 LCR meter. This instrument effectively isolates individual diode branches from the others, allowing accurate capacitance measurement of each branch or each diode. The conditions are: 20 mV R.M.S. voltage at 1 MHz. HP defines this measurement as "CM", and it is equivalent to the capacitance of the diode by itself. The equivalent diagonal and adjacent capacitances can then be calculated by the formulas given below.

In a quad, the diagonal capacitance is the capacitance between points A and B as shown in the figure below. The diagonal capacitance is calculated using the following formula

$$C_{\text{DIAGONAL}} = \frac{C_1 \times C_2}{C_1 + C_2} + \frac{C_3 \times C_4}{C_3 + C_4}$$

The equivalent adjacent capacitance is the capacitance between points A and C in the figure below. This capacitance is calculated using the following formula

$$C_{\text{ADJACENT}} = C_1 + \frac{1}{\frac{1}{C_2} + \frac{1}{C_3} + \frac{1}{C_4}}$$

This information does not apply to cross-over quad diodes.
